Course content

What aspects of this course were most useful or valuable?

3 responses

The live practical sessions.

Nikhils enthusiasm and commitment were really amazing. The materials were well prepared and shared in advance to facilitate effective learning. R was a bit intimidating for me initially and the way we were able to play around showed me the possibilities that lies ahead.

In terms of content, sorting or grouping data and plotting were the most helpful part of the course. This is likely to help me understand and communicate data trends. In addition, the following practices enables a smooth assimilation of content:

1. Using real database for practice
2. Practicing codes simultaneously during the lecture
3. Receiving ppts well in advance so that I could go to sessions prepared

How would you improve this course?

3 responses

As it was online, could not able to make complete participation. I could comment on this if it would have in-class sessions.

I feel it would have been much better with more hands on study. If the students were asked to choose a dataset as well as research problem and then working on it simultaneously with learnings from the class would have made the course more engaging. This would have also helped to have a visible outcome from the course.

I do not have suggestions for course content. In my opinion, it was comprehensive.
